

## Summer

### **First Monarch**

Report the **FIRST** monarch butterfly you see this season, even if you don't see your first until August.

[Report](#) to the category: *Monarch (FIRST Sighted)*

### **Additional Monarch Sightings**

Report **ALL** monarch butterflies you see this summer. Whenever you see a monarch, we want to know.

[Report](#) to the category: *Monarch Adult Sighted*

### **Monarch Eggs**

Report all monarch eggs. They are usually found underneath young milkweed leaves, but may be along the stems or in budding leaves at the tip.

[Report](#) 1st eggs to: *Monarch Egg (FIRST Sighted)*

[Report](#) additional eggs to: *Monarch Egg Sighted*

### **Monarch Larvae**

Report all monarch caterpillars. Larvae hatch from eggs about 2-5 days after they were laid. The two larvae in this picture show how much a caterpillar can grow in about two weeks.

[Report](#) 1st larva to: *Monarch Larva (FIRST Sighted)*

[Report](#) additional larvae to: *Monarch Larva Sighted*

All sightings are included on Journey North's [real-time maps](#). Citizen scientists are making important contributions to the understanding of monarchs and migration.

**Report Your Sightings**
