## The Global Climate Exploring Factors That Affect Plant Growth

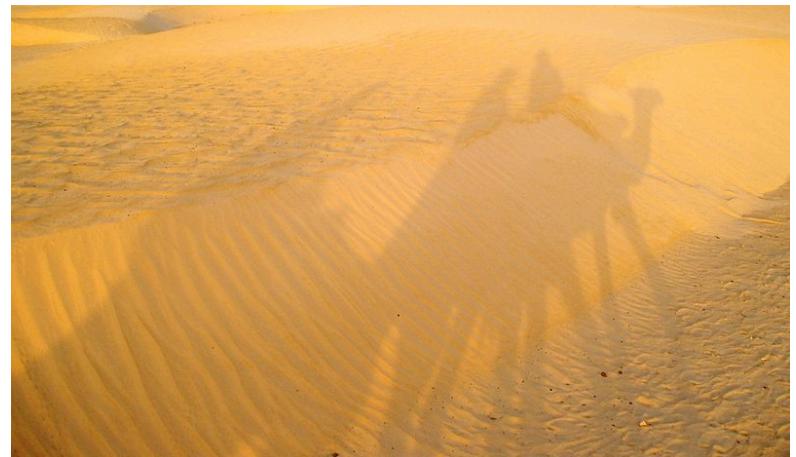

## Gardens Around the Globe

Wet, dry, cold, hot, windy, calm. Citizen scientists have planted test gardens in many different climates across the globe.

Some places have a dry climate.

In other places the climate is especially wet.

Some places have a cold climate.

In other places the climate is warm.

Some places have a climate with a foggy season.

Other places have a climate with a windy season – sometimes *dangerously* windy!

How do the Earth's different climate conditions affect plant growth?
