

HELP MONITOR MONARCHS IN SOUTHEASTERN U.S. DURING WINTER MONTHS

REPORT: MONARCH ADULT SIGHTED

- **What?** Number of monarchs observed. Let us know how long you spend observing and counting (1 min? 5min? 15min?).
- **When?** From December 2021 to March 2022.
- **How often?** Once a week from same location if monarchs are present.
- **Photos?** Yes, upload one photograph for each report submitted.
- **Comments?** Yes, were monarchs flying? Nectaring? From what flowers? Basking/resting in the sun? On what bush or tree?

REPORT: MONARCH EGG AND LARVA

- **What?** Monarch eggs and larvae observed from one location. You do not need to count eggs or larvae. Presence alone will tell us if breeding is occurring.
- **When?** From December 2021 to March 2022.
- **How often?** Once a week from same location if eggs or larvae are present.
- **Photos?** Yes, upload one photograph for each report submitted.
- **Comments?** Tell us what species of milkweed did you observed the monarch egg, if known.

REPORT: MILKWEED

- **What?** Milkweed observed from one location. You do not need to count stems.
- **When?** From December 2021 to March 2022.
- **How often?** Once a week from same location if milkweed are present.
- **Photos?** Yes, upload one photograph for each report submitted.
- **Comments?** Tell us what species of milkweed did you observed, if known.
